RE: Proposed Reconstruction of CR-19 (Holbrook Road) from Waverly Ave to CR-80 (Montauk Hwy), Village of Patchogue, Town of Brookhaven

---

Enclosed is an Environmental Assessment Form for the above referenced County project which has been submitted to the Council on Environmental Quality (CEQ) for review. Pursuant to Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code, the CEQ must recommend a SEQRA classification for the action and determine whether it may have a significant adverse impact on the environment which would require the preparation of a Draft Environmental Impact Statement (DEIS).

The Council would like to know your environmental concerns regarding this proposal and whether you think a DEIS or a determination of non-significance is warranted. This project will be discussed at the **August 15, 2018** CEQ meeting. If you are unable to attend the meeting to present your views, please forward any recommendations or criticisms to this office prior the date of the meeting. **If the Council has not heard from you by the meeting date, they will assume that you feel that the action will not have significant adverse environmental impacts and should proceed accordingly.**

Capital Program:                      Item # 5040                      Date Adopted:                      Amount: \$5,300,000

**Brief Description of Proposed Action (include purpose or need/attach relevant design reports, plans, etc.):**

The proposed action includes the reconstruction and realignment of CR-19 (Holbrook Rd) from Waverly Avenue to CR-80 (Montauk Highway), and the construction of a 1-lane roundabout at the CR-19/Lake Street Intersection. CR-19 will be reduced from 2 lanes in either direction, to 1 lane in either direction, throughout the project limits. In the vicinity of the Great Patchogue Lake, the roadway will be shifted south away from the lake. A park will be constructed in the newly created space between the roadway and the lake. The new park will feature an asphalt shared use path for bicyclists and pedestrians, as well as benches informational signs and other amenities. Shorefront improvements will include the removal of invasive species & wetland re-establishment by means of planting native wetland species. Where possible, larger existing trees will be incorporated into the new park's design.

The project also includes storm water improvements. Bioretention swales will be constructed within the new park area. New catch basins located along the new roadway will collect runoff and direct it the bioretention swales. The connected network of swales will effectively treat the storm water before it re-enters groundwater and/or the Patchogue River system. Currently, untreated runoff from the site is piped directly into the Patchogue River.

In addition, the project includes traffic signal upgrades at the two signalized intersections within the project limits. This includes the CR-19/Blue Point Brewery & YMCA intersection as well as the CR-19/CR-80 (Montauk Highway) intersection. Stamped concrete crosswalks with red brick pattern will be installed at signalized intersections. All sidewalk ramps will be reconstructed to meet current ADA & PROWAG standards.

This project may include ancillary work to be performed by various utility companies, which may include relocating underground and/or overhead electric, underground and/or overhead telephone/communications, and underground gas, water and/or sewer infrastructure as necessary to construct the improvements proposed.

Excavation along shoreline for purposes of removing invasive wetland species such as phragmites to a depth of +/-4 feet. This is done to completely remove the root system in it's entirety.	
How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site? Volume: 6,055 cy (existing paved surface removal; invasive species removal; cut (earth); topsoil striping etc.) Over what duration of time: 15 months	
Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them: Testing of the excavated materials may be required by NYSDEC as part of its permit approval requirements. Excavated material will be removed immediately from the site, as limited ROW limits the ability to stockpile. If minimal stockpiling occurs, it will be short term and will be fully protected with SWPPP measures and practices (i.e. silt fence at toe of slope).	

**D.2.a (cont.) – only answer following if checked “Yes” above**

Will there be onsite dewatering or processing of excavated materials?

If Yes, describe: No

What is the total area to be dredged or excavated? Area of invasive species to be excavated/removed: 9,320 sf.

What is the maximum area to be worked at any one time? 9,320 sf

What would be the maximum depth of excavation or dredging? 4 feet

Will the excavation require blasting? no

Summarize site reclamation goals and plans: Restoration plans include the removal of invasive species (Phragmites, etc.) along the shoreline (9,320 sf total) to a minimum root depth of +/-4 feet. Excavation will be done to achieve complete removal of the species root mass systems. Existing native trees located within the wetland area that are in good health (species such as Silver and Red Maples) will be protected and saved. The remaining invasive tree and shrub species will be removed and restored with native freshwater wetland species. Excavated area to be restored shall be replaced with clean sandy fill, and re-graded to a slope of 1 on 3. The slope shall have a layer of geotextile fabric with a 6 inch layer of approved specified wetland topsoil. To protect the slope at the waters' edge, Bio log fiber rolls with live staking will be installed at the toe of the new wetland slope for erosion control. A waterfowl enclosure fence will be installed on the lakeside of the bio logs and at the top of the slope to protect newly established wetlands from waterfowl grazing on newly installed plantings. Native emergent plantings and wetland bottom seeding mix will be installed/planted along the lower portion of the new wetland slope. Native wetland upland perennials & grasses will be planted/installed along the upper portion of the wetland slope. In addition to restoring wetland loss along the lakeshore, bioretention swales (14,038 sf total) will be constructed. These bioretention swales shall be planted with the native wetland species.

Major goals of the proposed site reclamation include:

1. Creating a wetland habitat in which native plants, animals and insect can survive.
2. Establish wetland habitat that completes the cycle of beneficial insects/animals/fish to control mosquitoes breeding areas.
3. Remove pollutants from storm runoff before it can re-enter the groundwater and surrounding waterways.
4. Create a scenic vista that the public can experience and enjoy either as a pedestrian or a motorist passing through the corridor.

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, water body, shoreline, beach or adjacent area?

**If Yes:**

Identify the wetland or water body which would be affected (by name, water index number, wetland map number or geographic description): Great Patchogue Lake

Describe how the proposed action would affect that water body or wetland, e.g. excavation, fill, placement of structures or creation of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres: Wetland restoration along approx. 875 feet of lakeshore. Restoration will include removal of invasive species (to a depth of 4 feet), and replacement of native wetland species. Wetland areas along the shorefront will increase by approx. 0.17 acres. In addition, approx. 0.32 acres of bioretention swales will be constructed directly adjacent to the lake and restored wetlands. The purpose of the bioretention swales will be to remove pollutants from storm runoff before it can re-enter the groundwater and surrounding waterways. The bioretention swales will be planted with the appropriate native plantings.

Will proposed action cause or result in disturbance to bottom sediments?

**If Yes,** describe: Yes. Removal of invasive wetland species will consist of excavation and removal to a depth of 4 feet. This may cause slight disturbance to the adjacent bottom sediments. No direct excavation of bottom sediments will take place.

Will proposed action cause or result in the destruction or removal of aquatic vegetation?

Yes  No

**If Yes:**

Area of vegetation proposed to be removed: 0.21 acres
Expected acreage of aquatic vegetation remaining after project completion: 0.38
Purpose of proposed removal (e.g., beach clearing, invasive control, boat access): removal of invasive species
Proposed method of plant removal: excavation to a depth of 4'
If chemical/herbicide treatment will be used, specify product(s): none

Describe any proposed reclamation/mitigation following disturbance: re-establishing approx. 875 feet of shorefront wetlands by means of planting native wetland species once the invasive species have been fully removed. In addition, approx. 0.32 acres of bioretention swales will be constructed in the park directly adjacent to the restored wetlands. The purpose of the bioretention swales will be to remove sediment and pollutants such as nitrogen from runoff before it can re-enter the groundwater and surrounding waterways. The bioretention swales will be planted with the appropriate native plantings.

The pipes will direct collected runoff into concrete manhole structures located in the bioretention swales. These manhole structures will have open grates, allowing the stormwater to bubble over out into the swale, where it be filtered through engineered soil media. In cases of heavy rainfall events, stormwater in the bioretention swales will overflow into concrete overflow structures via open grate. **FULL ENVIRONMENTAL ASSESSMENT FORM**  
6 NYCRR Part 617  
State Environmental Quality Review

**Part 2 – Identification of Potential Project Impacts**

Instructions: Part 2 is to be completed by the lead agency. It is designed to help the lead agency inventory all potential resources that could be affected by a proposed project or action. We recognize that the lead agency’s reviewer(s) will not necessarily be environmental professionals. So, the questions are designed to walk a reviewer through the assessment process by providing a series of questions that can be answered using the information found in Part 1. To further assist the lead agency in completing Part 2, the form identifies the most relevant questions in Part 1 that will provide the information needed to answer the Part 2 question. When Part 2 is completed, the lead agency will have identified the relevant environmental areas that may be impacted by the proposed activity.

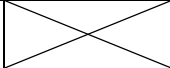

**Tips for completing Part 2:**

- \_\_\_\_\_ Review all of the information provided in Part 1.
- \_\_\_\_\_ Review any application, maps, supporting materials and the Full EAF Workbook.
- \_\_\_\_\_ Answer each of the 18 questions in Part 2.
- \_\_\_\_\_ If you answer “YES” to a numbered question, please complete all the questions that follow in that section.
- \_\_\_\_\_ If you answer “NO” to a numbered question, move on to the next numbered section.
- \_\_\_\_\_ Check appropriate column to indicate the anticipated size of the impact.
- \_\_\_\_\_ Proposed projects that would exceed a numeric threshold contained in a question should result in the reviewing agency checking the box “**Moderate to large impact may occur.**”
- \_\_\_\_\_ The reviewer is not expected to be an expert in environmental analysis.
- \_\_\_\_\_ If you are not sure or undecided about the size of an impact, it may help to review the sub-questions for the general question and consult the workbook.
- \_\_\_\_\_ When answering a question consider all components of the proposed activity, that is, the “whole action.”
- \_\_\_\_\_ Consider the possibility for long-term and cumulative impacts as well as direct impacts.
- \_\_\_\_\_ Answer the question in a reasonable manner considering the scale and context of the project.

**SUFFOLK COUNTY**  
**FULL ENVIRONMENTAL ASSESSMENT FORM**  
6 NYCRR Part 617  
State Environmental Quality Review

**Part 3 – Evaluation of the Magnitude and Importance of Project Impacts  
and  
Determination of Significance**

Part 3 provides the reasons in support of the determination of significance. The lead agency must complete Part 3 for every question in Part 2 where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.

Based on the analysis in Part 3, the lead agency must decide whether to require an environmental impact statement to further assess the proposed action or whether available information is sufficient for the lead agency to conclude that the proposed action will not have a significant adverse environmental impact. By completing the certification on the next page, the lead agency can complete its determination of significance.

**Reasons Supporting This Determination:**

To complete this section:

- \* \_\_\_\_\_ Identify the impact based on the Part 2 responses and describe its magnitude. Magnitude considers factors such as severity, size or extent of an impact.
- \* \_\_\_\_\_ Assess the importance of the impact. Importance relates to the geographic scope, duration, probability of the impact occurring, number of people affected by the impact and any additional environmental consequences if the impact were to occur.
- \* \_\_\_\_\_ The assessment should take into consideration any design element or project changes.
- \* \_\_\_\_\_ Repeat this process for each Part 2 question where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.
- \* \_\_\_\_\_ Provide the reason(s) why the impact may, or will not, result in a significant adverse environmental impact
- \* \_\_\_\_\_ For Conditional Negative Declarations identify the specific condition(s) imposed that will modify the proposed action so that no significant adverse environmental impacts will result.
- \* \_\_\_\_\_ Attach additional sheets, as needed.

Part II Questions 3.d/3.e:

Impact to adjoining freshwater wetlands will include minor disturbance during construction. Minor disturbances will be limited to the installation & removal of silt fence along landward edges of wetland edges of excavation. A turbidity curtain will be installed along the lakeside of the wetland excavation to contain disturbed sediment and prevent it from entering the lake.

Wetland restoration will include the removal of invasive species (Phragmites, etc.) along the shoreline to a minimum root depth of +/-4 feet. Excavation will be done to achieve complete removal of the species root mass systems. Excavated material will be removed immediately from the site, as limited ROW limits the ability to stockpile. If minimal stockpiling occurs, it will be short term and will be fully protected with SWPPP measures and practices. Existing native trees located within the wetland area that are in good health (species such as Silver and Red Maples) will be protected and saved. The remaining invasive tree and shrub species will be removed and restored with native freshwater wetland species. Excavated area to be restored shall be replaced with clean sandy fill, and re-graded to a slope of 1 on 3.

Continued on next sheet..

Part II Question 3.d/3.e, (continued from previous sheet..)

The slope shall have a layer of geotextile fabric with a 6 inch layer of approved specified wetland topsoil. To protect the slope at the waters' edge, Bio log fiber rolls with live staking will be installed at the toe of the new wetland slope for erosion control. A waterfowl enclosure fence will be installed on the lakeside of the bio logs and at the top of the slope to protect newly established wetlands from waterfowl grazing on newly installed plantings. Native emergent plantings and wetland bottom seeding mix will be installed/planted along the lower portion of the new wetland slope. Native wetland upland perennials & grasses will be planted/installed along the upper portion of the wetland slope.

In addition to restoring wetland loss along the lakeshore, bioretention swales (14,038 sf total) will be constructed. These bioretention swales shall be planted with the native wetland species. All freshwater wetland work will be done in accordance with NYSDEC permit approvals and requirements.

Part II Question 3.i:

The proposed action will result in a positive impact and affect on water quality within adjoining water bodies (i.e. Great Patchogue Lake; Patchogue River), as well as down stream water bodies (i.e. Patchogue Bay; Great South Bay). The proposed action includes the installation of a network of bioretention swales, which will remove sediment and pollutants such as nitrogen from storm water collected within the project limits. Currently, untreated runoff from the site discharges directly into both the Great Patchogue Lake and the Patchogue River. Therefore the proposed action will result in a positive affect on water quality in area water bodies.

Part II Question 9.c:

The proposed action will result in an improvement to public visibility of the Great Patchogue Lake. The project includes removal of invasive species along the lake shoreline within the project limits. Currently, overgrown invasive species block a large percentage of the lake from public view. The proposed action includes the creation of a public park space along the lakefront, which will include benches facing the lake. The park will include a shared use path for bicyclists and pedestrians. The lake will be visible for the entire length of the share use path. In addition park visitors, commuters in automobiles traveling along the newly realigned CR-19 will benefit from uninhibited views of the lake as well.

Part II Question 13.c:

The proposed action will result in a positive alteration of the movement of people throughout the site. Currently, motorists traveling westbound on Lake Street are unable to turn south onto CR-19 towards main street due to the current intersection configuration. The proposed action includes the construction of a 1-lane roundabout, which will allow motorists to make the movement previously described. In addition, the installation of a roundabout will result in an improved flow of traffic, compared to the current stop sign controlled intersection. The proposed action also includes the installation of a share use path. This, combined with the installaiton of 5' min shoulders will allow bicyclists to travel safely through the the project limits. Currently, there are no provisions for bicyclists to safely travel through the site.

This project will be constructed in stages, in order to maintain traffic flow along CR-19 during construction. Existing pavement combined with temporary pavement will provide motorists with a route

Part II Question 13.c, (continued from previous sheet..)

to travel in both directions along CR-19 through the site during early stages of construction. In later stages, the roundabout will be utilized to keep CR-19 traffic flowing in both directions. Lesser traveled movements such as turns from CR-19 onto Lake street may require short term closures during certain stages. These short term closures will be kept to a minimum and will be reopened immediately upon completion. Fully signed detours will remain in place for the duration of a closure.

Along CR-19 within the project limits there are two (2) driveways for the Blue Point Brewery. The easternmost driveway is an un-signalized entrance-only which will be utilized by trucks making deliveries to the Brewery. During construction stages involving the closure of these driveways, trucks making deliveries as well as brewery patrons and employees will use a third driveway located along CR-80, outside the project limits. The reconstructed roadway and the right turn lane leading into the entrance-only driveway will be constructed of thick pavement section which can handle truck deliveries.

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

**Warning:** Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

 Web Soil Survey URL:  
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Suffolk County, New York  
 Survey Area Data: Version 15, Oct 8, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Dec 31, 2009—Oct 13, 2016

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.
